GEALAN S8000

The GEALAN S8000 window system is designed to offer both cost-efficiency and high performance. With a 74 mm profile depth and 6 chamber profile, it ensures excellent thermal and acoustic insulation. The large main chamber accommodates substantial steel reinforcements, enhancing stability and enabling the construction of large, durable windows. Suitable for new builds and renovations, this window system combines aesthetic appeal with practical benefits, making it a versatile choice for modern homes

A standout feature is the GECCO ventilation system, which improves indoor air quality by managing the exchange of indoor and outdoor air.

The S8000 features robust security enhancements, including reinforced steel components and advanced locking mechanisms, providing strong protection against forced entry and ensuring peace of mind.

GEALAN LINEAR

The GEALAN Linear System offers a modern, angular design that enhances the aesthetic appeal of buildings while allowing for maximum natural light. It is a more sleek and minimalistic design style that boasts excellent thermal insulation, soundproofing, and security features due to its multi-chamber profile and advanced sealing technology.

THE GEALAN LINEAR SYSTEM OFFERS SEVERAL ADVANTAGES:

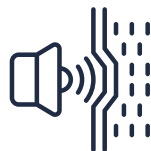

*****Thermal Efficiency*****

The multi-chamber profile and advanced sealing technology provide excellent thermal insulation, reducing energy costs.

*****Durability*****

Built to withstand diverse environmental conditions, ensuring long-term performance.

*****Soundproofing*****

The system offers superior sound insulation, creating a quieter indoor environment.

DOORS

PVC Door Threshold

20 mm in height- The impact-resistant door threshold of PVC perfectly meets the modern concept of threshold-free housing construction designed for handicapped people. Such a threshold is the finishing touch of the general system of GEALAN thresholds of aluminium, aluminium with a heat insulating gasket, and durable glass fiber with high thermal transmittance resistance indicators. The low thermal transmittance level of the PVC material ensures excellent thermal transmittance performance of the threshold made of it, thus reliably protecting the lower door part from heat loss.

Door Options Include:

Sliding Doors
French Doors
Single Front/Back Doors

Door Profiles Include:

Gealan S8000
Gealan Linear
Gealan Smoovio

Door Customizations

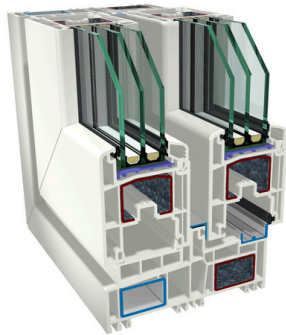

Profile Color: Black interior/white exterior, black interior/black exterior, white interior/white exterior, and customized colors available upon request!

Hidden Hinge System

GEALAN SMOOVIO

WHAT MAKES SMOOVIO DIFFERENT FROM ALL OTHER SLIDING DOORS?

01

INNOVATIVE TECHNOLOGY

Unlike traditional sliding doors, Smoovio employs advanced sealing that provides superior thermal and acoustic insulation, reducing energy costs and noise pollution.

02

EFFORTLESS GLIDING

The system is engineered for smooth, easy operation, minimizing effort while opening and closing, which enhances user experience. Its design maximizes usable space, making it perfect for smaller areas where swing doors would be impractical.

03

DURABILITY AND DESIGN

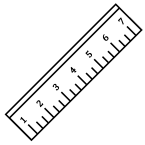

Constructed from top-quality materials, Gealan Smoovio doors are built to last and require minimal maintenance, ensuring long-term satisfaction. This design also offers a contemporary aesthetic that complements various architectural styles, adding a touch of elegance to any home.

◀ **INTEGRATED SECURE LOCKING MECHANISMS ENSURE A HIGH LEVEL OF SAFETY, PROVIDING PEACE OF MIND WITHOUT SACRIFICING CONVENIENCE.**

WE OFFER MORE FOR YOUR WINDOWS

CUSTOM BLINDS

All Blinds and Roller Shades are customized to your window and measured for a perfect fit. We offer a variety of fabric types and colors. All fabrics have varying levels of opacity ranging from low opacity all the way to black out- see our showroom or ask us for samples!

IN-SET BLINDS

Inset blinds are built directly into the window frame, giving a clean, uncluttered look that complements the sleek design of turn and tilt windows. Unlike traditional blinds or curtains that take up space, inset blinds are built in, saving you room and giving you a more streamlined window area. Inset blinds offer a modern, polished look that can enhance the overall appearance of your windows and room. These features make inset blinds a perfect match for turn and tilt windows, providing you with a stylish, practical, and durable window treatment solution.

FREE HANGING

Free hanging custom blinds offer a stylish and versatile window treatment option tailored to fit any space. These blinds can be customized in a variety of materials, colors, and patterns to match your décor perfectly. They provide excellent light control and privacy, allowing you to adjust them to your desired level easily. Free hanging blinds are also easy to install and operate, with options ranging from manual to motorized controls. Their design flexibility and functionality make them a popular choice for enhancing the look and comfort of any room.

PRODUCT DETAILS

S8000

GEALAN ECO-AGREEMENT

Commitment to recycling management—
Already prior to the Recycling Management and Waste Law coming into effect, GEALAN offered its customers “Recycling management” in the form of a “GEALAN eco- agreement”: Within the framework of this agreement, profile manufacturers and specialised window companies agree to recycle old plastic windows and the profile residues accumulating during window production. The goal is to supply the materials to closed PVC material recycling subject to prohibited landfilling. Since the high-quality PVC product – the thermoplastic material is made of the natural raw materials natural oil or natural gas and Common salt – is way too precious to be disposed of with the waste or in a waste incineration plant. Through its 100 percent recyclability, it absolutely lends itself for recycling. Even the PVC of removed old windows can be granulated and reconditioned. This way, PVC becomes one of the most recyclable materials.

RECYCLING

As a co-partner of REWINDO, GEALAN has committed itself to using recycled used window materials – obtained through the window industry’s recycling loop, which has been fully closed for over 25 years – in the inner core of its profiles. In this way, PVC from old windows is reused in an environmentally sensible way in new, highly insulating window profiles.
